Aspects of Logic Programming. z. Programs are written in the language of some logic. z. Execution of a logic program is a theorem proving process; that is, computation is done by logic inferences. z. Prolog (PROgramming in LOGic) is a representative logic language

2 Hardegree, Symbolic Logic 1. WHAT IS LOGIC? Logic may be defined as the science of reasoning. However, this is not to suggest that logic is an empirical (i.e., experimental or observational) science like physics, biology, or psychology. Rather, logic is a non-empirical science like mathematics.

Business Programming Logic: A Structured Approach, 1985

Business Programming Logic CDT100 This course makes use of flowcharting, pseudocode, and decision trees to provide a strong foundation in programming logic for business applications. Such logic is applicable regardless of the language the student will be programming in. Emphasis is on proper structures and common business applications.

Programming gives you complete control over an innocent, vulnerable machine, which will do your evil bidding with a loyalty not even your pet dog can rival. At least some if not all of these points will instantly appeal to you as a human being, and it's none of my business which ones you find most attractive.

Introduction to Programming - Dean's Director Tutorials

The business logic is the logic that you are writing into your program to handle the business rules that you are given. When you start getting into business rules, this tends to be at a higher level than crud itself or business logic.

Since logic programming computation is proof search, to study logic programming means to study proofs. We adopt here the approach by Martin-Löf [3]. Although he studied logic as a basis for functional programming rather than logic programming, his ideas are more fundamental and therefore equally applicable in both paradigms.
