Books. Carotenoids: A Colourful History: This book describes the history of the carotenoid field over 200 years, reaching a climax in the "Golden Age" of research by Nobel laureates Willst tter, Karrer and Kuhn as the chemistry of these natural pigments unfolded. It describes also how the field diversified into areas of biochemistry and biology, including photosynthesis, but especially as ...

The structure of carotenoids imparts biological abilities, including photosynthesis, photoprotection, plant coloration, and cell signaling. The general structure of the carotenoid is a polyene chain consisting of 9-11 double bonds and possibly terminating in rings. This structure of conjugated double bonds leads to a high reducing potential, or the ability to transfer electrons throughout the ...

This journal has partnered with Heliyon, an open access journal from Elsevier publishing quality peer reviewed research across all disciplines. Heliyon's team of experts provides editorial excellence, fast publication, and high visibility for your paper. Authors can quickly and easily transfer their research from a Partner Journal to Heliyon without the need to edit, reformat or resubmit.

Lycopene is a symmetrical tetraterpene assembled from eight isoprene units. It is a member of the carotenoid family of compounds, and because it consists entirely of carbon and hydrogen, is also a carotene. Isolation procedures for lycopene were first reported in 1910, and the structure of the molecule was determined by 1931.

Back to the top Apocarotenoids. Apocarotenoids are a class of carotenoids containing less than 40 carbon atoms, very widespread in nature and with extremely different structures. They derive from 40 carbon atom carotenoids by oxidative cleavage that can occur through non-specific mechanisms, such as photo-oxidation, or through the action of specific enzymes (these enzymatic activities ...

Free radicals can be defined as molecules or molecular fragments containing one or more unpaired electrons in atomic or molecular orbitals (Halliwell & Gutteridge, 1999). This unpaired electron(s) usually gives a considerable degree of reactivity to the free radical.

We recommend the use of glass-calomel electrodes for use with Trizma base solutions through a pH range of 0-12 and a temperature range of -5   C to 80   C. Silver/silver chloride reference electrodes are not recommended for use with Trizma solutions that contain proteins.

Formic acid is the simplest carboxylic acid. Formate is an intermediate in normal metabolism. It takes part in the metabolism of one-carbon compounds and its carbon may appear in methyl groups undergoing transmethylation. It is eventually oxidized to carbon dioxide. Formate is typically produced as a byproduct in the production of acetate. It is responsible for both metabolic acidosis and ...

GMO Golden Rice is promoted as a potent tool to alleviate vitamin A deficiency. However, Indian researchers now report that the genes needed to produce it have unintended effects. When they introduced the engineered DNA, their high-yielding and agronomically superior Indian rice variety became pale ...

Il licopene (da *solanum lycopersicum* o pomodoro) è un idrocarburo isomero aciclico del beta-carotene, contenente 11 doppi legami coniugati e 2 non coniugati, appartenente al gruppo dei carotenoidi. È un additivo alimentare usato come colorante e identificato dalla sigla E160d. È sintetizzato dalle piante e dai microrganismi, ma non dagli animali.
