

cheese chemistry physics and pdf

Whey cheese is a dairy product made of whey, the by-product of cheesemaking. After the production of most cheeses, about 50% of milk solids remain in the whey, including most of the lactose and lactalbumin. The production of whey cheese allows cheesemakers to use the remaining whey, instead of discarding it as a waste product.

Whey cheese - Wikipedia

Cheese is a dairy product derived from milk that is produced in a wide range of flavors, textures, and forms by coagulation of the milk protein casein. It comprises proteins and fat from milk, usually the milk of cows, buffalo, goats, or sheep. During production, the milk is usually acidified, and adding the enzyme rennet causes coagulation. The solids are separated and pressed into final form.

Cheese - Wikipedia

Welcome to the Dairy Education Book Series Dairy Processing education at the Ontario Agricultural College, University of Guelph, has been part of our mandate for nearly 140 years.
