Random forests - classification description

k-means clustering is a method of vector quantization, originally from signal processing, that is popular for cluster analysis in data mining. k-means clustering aims to partition n observations into k clusters in which each observation belongs to the cluster with the nearest mean, serving as a prototype of the cluster. This results in a partitioning of the data space into Voronoi cells.

k-means clustering - Wikipedia

UCR Time Series Classification Archive. Last major update, Summer 2015: Early work on this data resource was funded by an NSF Career Award 0237918, and it continues to be funded through NSF IIS-1161997 II and NSF IIS 1510741.

Welcome to the UCR Time Series Classification/Clustering Page

Cluster analysis or clustering is the task of grouping a set of objects in such a way that objects in the same group (called a cluster) are more similar (in some sense) to each other than to those in other groups (clusters). It is a main task of exploratory data mining, and a common technique for statistical data analysis, used in many fields, including machine learning, pattern recognition ...

Cluster analysis - Wikipedia

Prof. Dr. Knut Hinkelmann 6 Classification Schemes 3 Classification Classification is an organization means arranging information items into classes - dividing the universe of information into manageable and logical portions. A class or category is a group of concepts that have something in common. This shared property gives the class its identity.

6 Classification Schemes - Hinkelmann

Anomaly Detection: Anomaly detection has been greatly revised and expanded. Existing approaches – statistical, nearest neighbor/density-based, and clustering based – have been retained and updated, while new approaches have been added: reconstruction-based, one-class classification, and information-theoretic.

Introduction to Data Mining - www-users.cs.umn.edu

Data Mining i About the Tutorial Data Mining is defined as the procedure of extracting information from huge sets of data. In other words, we can say that data mining is mining knowledge from data.

About the Tutorial

For Definitions, Articles and Resources, see the Taxonomies and Classifiers page which discusses the entire concept of automated classification, categories, taxonomies, clustering, hierarchies, and browsable listings. See also the Visualization Tools report.
