### **A Computational Introduction to Number Theory and Algebra**

An abelian group is a set,  $A$ , together with an operation  $\circ$  that combines any two elements  $a$  and  $b$  to form another element denoted  $a \circ b$ . The symbol  $\circ$  is a general placeholder for a concretely given operation. To qualify as an abelian group, the set and operation,  $(A, \circ)$ , must satisfy five requirements known as the abelian group axioms: Closure

In mathematics, matrix multiplication or matrix product is a binary operation that produces a matrix from two matrices with entries in a field, or, more generally, in a ring or even a semiring. The matrix product is designed for representing the composition of linear maps that are represented by matrices. Matrix multiplication is thus a basic tool of linear algebra, and as such has numerous ...

In neural networks, the learning rate of the gradient descent is a crucial hyperparameter, whose tuning is time-consuming and prevents out-of-the-box training of a model.
